Thank you very much for selecting Pure-Pro Water Corp. In order to bring the best use of your system, please read the user's manual carefully before installation and follow the regulations.

### Introduction of EC106PH

# Maintenance checking list

#### EC106PH New 6 Stage with Alkaline Filter

The only filtration in the world today that will reduce acidity in the body and it will produce natural calcium, magnesium, sodium and potassium ions that can be absorbed 100% in the human body.

EC106PH is a super quality 6 stage filter system comes with PurePro® Alkaline Filter, to offer the very best in water filtration and balanced pH water for drinking. Using reverse osmosistechnologies with alkaline filter can actually remove 99.99% of contaminants and provide people with healthy alkaline drinking water.

#### Features

REVERSE OSMOSIS SYSTEM

01

PURE-PRO

- 100% factory tested and sterilized ready for installation
- 3.2 gallons NSF standards water storage tank
- FDA approved polypropylene made flat cap housing (double O'ring)
- Automatic shut-off valve
- Mini flow restrictor
- Stainless steel checkvalve
- European ceramic faucet
- · Feed water connector
- Drain saddle valve
- Four-color coded 1/4 inch tubing for system connection
- · Completely assembled

#### **Specifications**

- Production: 50 GPD/ 189 LPD
- Operation pressure: 50-100 PSI
- Dimensions: (cm) 37 (L) x 20 (W) x 48 (H) System (cm) 28 (L) x 28 (W) x 35 (H)-Tank
- Weight: 9kg system
  - 4 kg tank

EC106 Upgrade Body Function RO System

#### **Q:** What is the guarantee on the PurePro system ?

The PurePro system (excluding filters) is guaranteed for 1 year for material and workmanship. All defective parts will be replaced free within the first year under natural breakdown. The membrane has one year pro-rated guarantee.

#### **Q**: What factors affect the quantity and the quality of the water production?

There are four major variables to consider:

SYSTEM

Reverse osmosis

PURE-PRO

- 1. **Pressure**-The greater the water pressure, the better water quantity and quality it produced. Water pressure of 60 PSI is ideal.
- 2.**Temperature**-76°F is the ideal water temperature for R.O. 40°F water will cause the production of R.O. water to fall to half of that at 76°F. The maximum water temperature recommended is 85°F.
- 3. **Total Dissolved Solids (TDS)**-The higher the amount of dissolved contaminants in the water, the lower the quantity of water produced. A high level of TOTAL DISSOLVED SOLIDS can be overcome with additional water pressure.
- 4.**Membrane**-Different membranes have different characteristics. Some produce more water than others; some have better contaminant rejection capabilities; some have greater resistance to chemical abrasion for longer life. PurePro system includes TW30-1812-50 The Thin Film Composite (TFC) membranes combine the best of these characteristics and are considered the finest membrane in the world.

#### Q: What is the maintenance schedule for the PurePro system?

The three pre-filter cartridges should be changed every 6 months. The 5 micron sediment cartridge filter is the first one; the second is a carbon cartridge filter, and the third one is a 1 micron sediment filters. (some systems comes with the Extruded carbon filter.) Failure to change the cartridge every 6 months may cause chlorine to destroy the membrane.

#### Q: What does the PureProseries drinking water taste like?

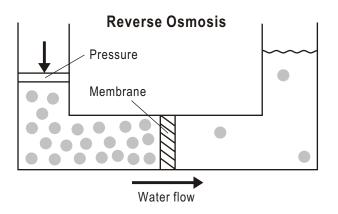

The taste of the PurePro water depends on the amount of contaminants in the tap water originally. If 95% of dissolved minerals and chemicals are removed, the R.O. water may taste like distilled water (no minerals), bottled water (low mineral), or natural spring water (moderate mineral content).

EC106 Upgrade Body Function RO System

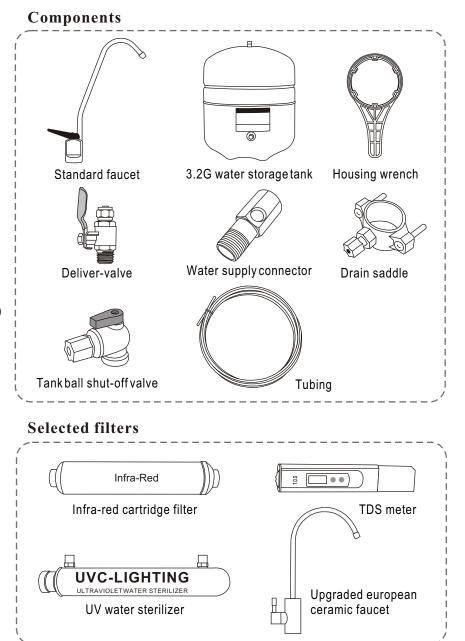

What is reverse osmosis

Reverse osmosis was originally designed to make sea water drinkable for the navy. It is ideal for anyone on a low sodium diet. An R.O. membrane has a pore size much smaller than bacteria virus, or the cryptosporidium parasite. When functioning properly it will remove all microorganisms from tap water and produce sterile water. Reverse osmosis is the reversal of the natural flow of osmosis. In a water purification system, the goal is not to dilute the salt solution, but to separate the pure water from the salt and other contaminants. When the natural osmotic flow is reversed, water from the salt solution is forced to pass through the membrane in the opposite direction by application of pressure-thus the term REVERSE OSMOSIS. Through this process, we are able to produce pure water by screening outthe salts and other contaminants.

EC106 Upgrade Body Function RO System

# The functions of Alkaline Filter

The Alkaline filter changes the acidic RO water into a perfect Natural Alkali Calcium lonized Water. The PurePro® Alkaline filter simply gives back minerals such as ionized calcium, magnesium, sodium, potassium ion, which were taken away while purifying the water. The PurePro® Alkaline filter is effective and affordable.

Produce perfectly ph-balanced alkaline water

- Help minimize the fluctuations of yourbody's pH.
- Turn acidic drinking water into alkali calcium ion water.
- This natural calcium, magnesium, sodium, potassium ions can be absorbed 100% by the body.
- It is easily absorbed in the body because it has structurally smaller molecules which help the body take in more water and replenish quickly lostwater.
- Makes the water cleaner and healthier.

### **Operation regulation**

- A.With everything connected, turn on the water check for leaks.
- B.Make sure the storage tank shut-off valve is "OFF". Open the sink top faucet.
- C.Within a few minutes (up to 15) the water will start to run from the faucet slowly.
- D.Let the water run for at least 30 minutes. This flushes the carbon filters on first time use.
- E.After initial flushing, open the shut-off valve on the tank and close the sink top faucet.
- F.Tank will now full of water (usually 2 to 3 hours) after the tank has filled. Open the sink top faucet and drain all water until the storage tank is empty and there is only a small flow from the sink top faucet.\*\*\* DO NOTUSE FIRSTTANK OF WATER.\*\*\*
- G.Close the sink top faucet. The system is now ready for use.
- H.Change filters regularly every 6 to 12 months and have the membrane checked annually.

#### Caution

- 1.Do not usehot water (over 45°C)!
- 2.Do not freeze the machine!
- 3.Switch off electricity and water source if away for more than 5 days, and drain outpure water.

# **Cartridge Filters**

Cartridge Filters	Filter Description	Service Life	
Stage 1 5 Micron Sediment Filter	This 5micron sediment filter is made of 100% pure polypropylene fibers. High capacity filter removes dusts, particles and rusts.	6 Months	
Stage 2 Block Carbon Filter	This block carbon filter is composed of high- performance carbon that removes free chlorine, odor, organic contaminants, pesticides and chemicals that contributed to taste and odor.	6 Months	
Stage3 1 Micron Sediment Filter	This 1micron sediment filter is made of 100% pure polypropylene fibers. High capacity filter removes dusts, particles and rusts.	6 Months	
Stage 4 TFC Membrane	Made in USA. High rejection TFC type membrane with the capacity of producing 50 gallons per day. This membrane removes the following hard water contaminants that may be present in your water: lead, cooper, barium, chromium, mercury, sodium, cadmium, fluoride, nitrite, nitrate, and selenium.	2 Years	
Stage 5 Post Carbon Filter	NSF approved. This post carbon filter is designed to improve taste. It removes any residual impurities and odors from the tank and provides a finer conditioning of pure water.	1 Year	
Stage 6 Alkaline Filter	<b>r</b> <b>h</b> <b>h</b> <b>h</b> <b>h</b> <b>h</b> <b>h</b> <b>h</b> <b>h</b>

#### CONNECTING THE COLOR TUBING:

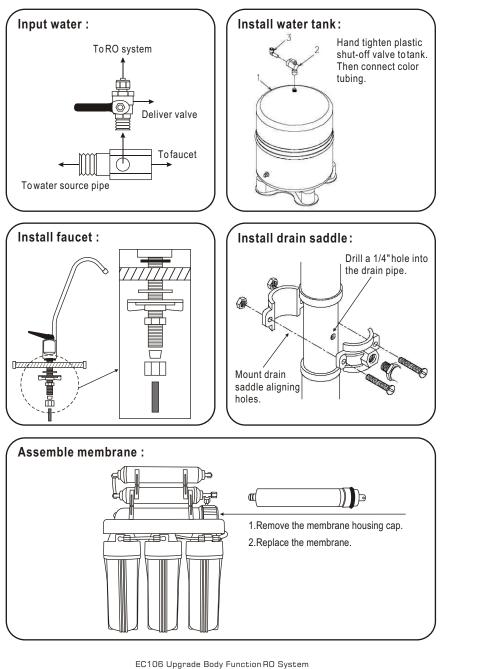

- A. Connect the WHITE tubing to the water supply connector.
- B. Connect the  $\ensuremath{\mathsf{BLUE}}$  tubing to the sink top faucet.
- C. Connect the  $\ensuremath{\mathsf{BLACK}}$  tubing to the drain saddle.
- D. Connect the RED tubing to the storage tank.
