Thank you very much for selecting Pure-Pro Water Corp. In order to bring the best use of your system, please read the user's manual carefully before installation and follow the regulations.

RO105TDS-Smart Water Quality Monitor RO System

Comply with the advanced RO technology, RO 105TDS is designed for a life-long use for all families. This system hides away under your sink. Assembled with a smart water quality monitor , you are able to know the quality of water. It tests your water 24 hours to warn you not to drink bad water. RO105TDS doesn't apply chemicals or electricity to produce premium water quality. But with its stone-firmed high quality parts, RO105TDS is capable to remove over 95% of total dissolved solids, +99% of all organics, +99% of all bacteria, and reduces up to +99% of the chlorine. It also improves both taste and quality of water as well as objectionable odors and sediment. RO105TDS not only eliminates the harmful materials such as lead, cooper, barium, chromium, mercury, sodium, cadmium, fluoride, nitrite, nitrate, and selenium that may be present in your water, but also brings you healthy pure-tasting water from your fingertips.

PURE-PRO

- Production: 50 GPD / 189 LPD
- · Available in 110Volt, 220Volt Or 240Volt (50/60Hz) with a transformer
- Safety approval: TUV (EN60950) & CE MARK
- 100% factory tested and sterilized ready for installation
- Operation pressure: 45 -100 PSI
- 3.2 gallons NSF standards water storage tank.
- FDA approved polypropylene made flat cap housing (double O'ring)
- Automatic shut-off valve
- Flow restrictor
- Stainless steel check valve
- Long reach attractive chrome faucet
- Feed water connector
- Drain saddle valve
- Four-color coded 1/4 inch tubing for system connection
- Completely assembled
- Dimensions: (cm) 37 (L) x 20 (W) x 45(H) System (cm) 28 (L) x 35 (W) x 28(H) - Tank
- Weight: 8 kg System
 - 4 kg Tank

Q: What is the guarantee on the Pure-Pro system ?

The Pure-Pro System (excluding filters) is guaranteed for 1 year for material and workmanship. All defective parts will be replaced free within the first year under natural breakdown. The membrane has one year pro-rated guarantee.

Q: What factors affect the quantity and the quality of the water production?

There are four major variables to consider:

SYSTEM

OSMOSIS

REVERSE

13

PURE-PRO

- 1. **Pressure**-The greater the water pressure, the better water quantity and quality it produced. Water pressure of 60 PSI is ideal.
- 2.**Temperature**-76°F is the ideal water temperature for R.O. 40°F water will cause the production of R.O. water to fall to half of that at 76°F. The maximum water temperature recommended is 85°F.
- 3. **Total Dissolved Solids (TDS)**-The higher the amount of dissolved contaminants in the water, the lower the quantity of water produced. A high level of TOTAL DISSOLVED SOLIDS can be overcome with additional water pressure.
- 4.Membrane-Different membranes have different characteristics. Some produce more water than others; some have better contaminant rejection capabilities; some have greater resistance to chemical abrasion for longer life. Pure-Pro system includes RE1812-70 The Thin Film Composite (TFC) membranes combine the best of these characteristics and are considered the finest membrane in the world.

Q: Can the Pure-Pro system be connected to an extra faucet?

It only takes a 1/4" tee and tubing to run the water to a refrigerator or a extra faucet. Some families run Pure-Pro system to all of their bathrooms.

Q: What does the Pure-Pro series drinking water taste like?

The taste of the Pure-Pro water depends on the amount of contaminants in the tap water originally. If 95% of dissolved minerals and chemicals are removed, the R.O. water may taste like distilled water (no minerals), bottled water (low mineral), or natural spring water (moderate mineral content).

Q: How will the Pure-Pro series water affect mixed beverages?

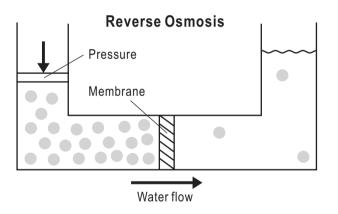

Because reverse osmosis removes invisible contaminants that mask flavor, it allows the natural taste of your beverages to come through. You will be able to use less coffee and still get the full flavor. Concentrated beverages like orange juice will taste tangier. You will probably be drinking a lot more water as well, since many people drink soda, Kool-Aid, concentrated juices, and beer as an alternative to bad-tasting tap water. Also, Pure-Pro eliminates most of the lime build up on drip coffee makers, preventing the need for frequent cleaning. No longer will you find the white scum on the inside of pans after boiling water.

R0105TDS Smart Water Quality Monitor RO System

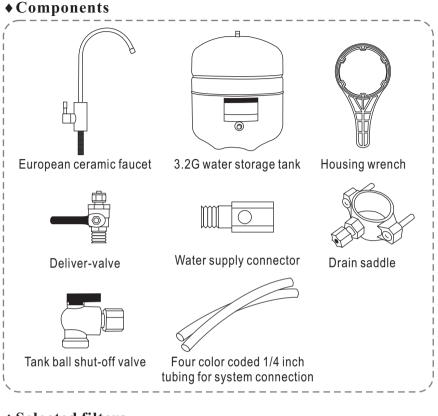

What is reverse osmosis

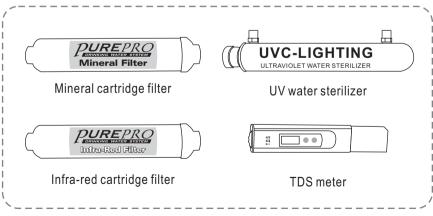

Reverse osmosis was originally designed to make sea water drinkable for the navy. It is ideal for anyone on a low sodium diet. An R.O. membrane has a pore size much smaller than bacteria virus, or the cryptosporidium parasite. When functioning properly it will remove all microorganisms from tap water and produce sterile water. Reverse osmosis is the reversal of the natural flow of osmosis. In a water purification system, the goal is not to dilute the salt solution, but to separate the pure water from the salt and other contaminants. When the natural osmotic flow is reversed, water from the salt solution is forced to pass through the membrane in the opposite direction by application of pressure-thus the term REVERSE OSMOSIS. Through this process, we are able to produce pure water by screening out the salts and other contaminants.

♦ Selected filters

R0105TDS Smart Water Quality Monitor RO System

- B.Make sure the storage tank shut-off valve is "OFF". Open the sink top faucet.
- C.Within a few minutes (up to 15) the water will start to run from the faucet slowly.
- D.Let the water run for at least 30 minutes. This flushes the carbon filters on first time use.
- E.After initial flushing, open the shut-off valve on the tank and close the sink top faucet.
- F.Tank will now full of water (usually 2 to 3 hours) after the tank has filled. Open the sink top faucet and drain all water until the storage tank is empty and there is only a small flow from the sink top faucet.*** DO NOT USE FIRST TANK OF WATER.***
- G.Close the sink top faucet. The system is now ready for use.
- H.Change filters regularly every 6 to 12 months and have the membrane checked annually.

Caution

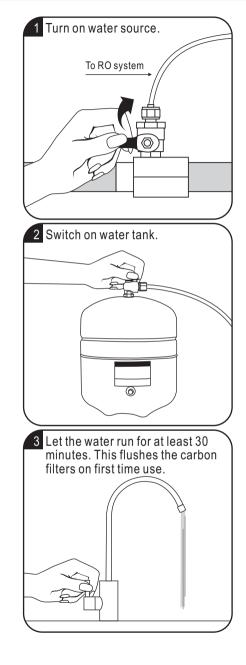

1.Do not use hot water (over 45°C)!
2.Do not freeze the machine!
3.Switch off electricity and water source if away for more than 5 days, and drain out pure water.

Operation regulation

Cartridge Filters

Cartridge Filters	Filter Description	Shelf life
Stage 1 5 Micron Sediment Filter	This 5micron sediment filter is made of 100% pure polypropylene fibers. High capacity filter removes dusts, particles and rusts.	6 Months
Stage 2 Block Carbon Filter	This block carbon filter is composed of high- performance carbon that removes free chlorine, odor, organic contaminants, pesticides and chemicals that contributed to taste and odor.	6 Months
<u>Stage3</u> 1 Micron Sediment Filter	This 1micron sediment filter is made of 100% pure polypropylene fibers. High capacity filter removes dusts, particles and rusts.	6 Months
Stage 4 TFC Membrane	Made in USA. High rejection TFC type membrane with the capacity of producing 80 gallons per day. This membrane removes the following hard water contaminants that may be present in your water: lead, cooper, barium, chromium, mercury, sodium, cadmium, fluoride, nitrite, nitrate, and selenium.	4 Years
Stage 5 Post Carbon Filter	NSF approved. This post carbon filter is designed to improve taste. It removes any residual impurities and odors from the tank and provides a finer conditioning of pure water.	1 Year

POWER(red): plug in electrity. change the battery if the light is not on. GOOD(green): shows PPM(TDS level) is between 00-39. BAD(red): shows PPM is over 40.

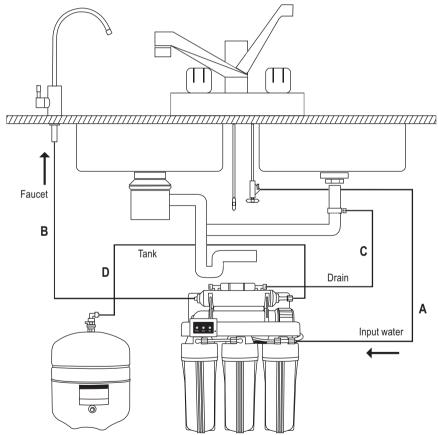

NOTICE: 1. Press the bottom, water quality testing goes on for 2 minutes. 2. Alarm goes on for one minute when PPM is higher than 40.

Tubing connection diagram

CONNECTING THE COLOR TUBING:

- A. Connect the WHITE tubing to the water supply connector.
- B. Connect the BLUE tubing to the sink top faucet.
- C. Connect the BLACK tubing to the drain saddle.
- D. Connect the RED tubing to the storage tank.
